- Tender floating.
- Bid receiving & comparisons.
- Negotiations.
- Advising client to Award the package**.**

Contractual Conditions for contract document:- (Advising and Drafting)

Advice on the appropriate form of tendering procedure and documentation including selection of Contractors, preparation of Activity Schedules, Bills of Quantities, Schedules of Rates and Specifications for all elements of building and civil engineering projects. Determination and preparation of Employer's requirement documents for Design & Construct projects.

Contract Preparation:-

The basis of any construction contract should be a Standard Form of Building Contract issued by a recognized body. We will advise which standard form of contract should be used and explain relevant clauses to Clients where required. Once an acceptable tender has been obtained the contract has to be prepared with care to ensure that the intentions of the parties are fully reflected in the documentation.

Specifications:-

A Materials and Workmanship Specification, usually based upon the National Building Specification, can be produced. This may be produced in conjunction with an Architect or Engineer. Alternatively these professionals may produce this specification themselves.

Bills of Quantities:-

This tender document is used for larger construction projects where tenders are being sought from construction companies as opposed to small builders. The Bills are produced in accordance with the Standard Method of Measurement and produced in a format in order that all professional estimators and quantity surveyors readily understand it. Rates are therefore obtained for all items of works on a unit rate basis and this is built up to form the contractors tender.

Budget Estimates:-

Once an outline scheme proposal has been developed frozen by client a detailed budget estimate will predict the overall cost. We will also set out the specification that has been allowed for in the budget and how the cost is allocated to the specification. These enable the client to make choices before the design is too far developed to influence the design to achieve cost targets. The design can then be monitored and any anticipated changes in costs advised as the scheme develops.

Cash Flow Forecasts:-

Once tender is accepted and awarded we will prepare a detailed cash flow statement month wise showing how the contract sum will be spent on a monthly basis over the entire contract period, based upon the Contractors construction program, including clients supplied material.

Schedule of Works:-

During construction in progress some works which are not having substantial quantity and are likely to be executed by a ' builder ' himself rather than depending on the main cont company a Schedule of Works can be produced which is easier for builders to understand rather that the more complex Bills of quantities. The Schedule will describe the works in a readily understood format that the tenders will be able to price on an item-by-item basis.

Running Bills Certification and Measurement:-

When contract award to contractor and execution starts we deploy billing & measurement staff to the site. The staff may be deployed at full time bases or partially basis that depends on the clients.

Final Account:-

After the works are complete we will prepare a Final Account stating the final project cost detailing any changes to the cost of the project.

Financial Statements:-

As the works proceed on site we will produce regular Financial Statements which keep the client up to date with the estimated final cost of the project.

Dispute Resolution:-

It is not always possible for the parties to reach agreement on a construction project. The contract makes provision for this and will generally set out the means by which differences are to be resolved. There are several alternatives depending upon the contract, for example Arbitration, Adjudication. These processes are meant to negate the requirement for full legal proceedings if possible, thus saving both time and money.

Post Contract Services:-

Preparation of cost estimates for post-contract variations and forecasts of anticipated final costs. Preparation of regular financial statements and cash flow forecasts, measurement and valuation of work in progress including the valuation of authorised variations. Preparation of recommendations for regular interim payments on account. Preparation of final accounts including measurement and valuation of variations, adjustments to nominated subcontractors accounts. Agreement of final accounts with Contractor and preparation of reports for the Client.

Quality Surveying Services:-

In competitive environment cost reduction are offered by market to win the work. To cope up our surveillance contractor negotiate with the QUALITY pertaining to material & producers. Hence poor qualities are produced at project. To maintain the international quality standard third party inspection/quality check are required. Considering this fact we start quality visit services to get international quality at project.

Quality visit:-

- We manage quality visit at site with moving cameras by our respect package teams and shoot up the bad quality snap.
- We manage the quality class at site in conference hall/auditorium with projector and educate to real executors for best quality.
- Provide visit report to our reputed client.

Project Management Consultant division (PMC):-

Recently we have introduced as a project management consultant division. We have developed the good and result oriented engineering team for PMC activities near Bengaluru and Mysore.

Our Moto for PMC:-

- To deliver the international quality projects in India.
- To maintain the cost in control providing value engineering.
- Single point contract.
- Since, time is very essence; we make sure we deliver projects in time.

Services provided by PMC Division:-

- Pre- construction services: - Evaluation of tender documents, Tender floating, Negotiations and contract awards.
- Construction: - Site mobilization, Kick off meetings with contractors, conducting of Site progress meeting (SPM), Design team meeting (DTM) and then site coordination meeting.
- Certification of running & final bills.
- Testing and commissioning of all services.
- Project close out.

OUR ORGANISATION GOAL

Our Operations Goal:-
